

JOB DESCRIPTION

Job Title: Product Owner **Location:** Cambridge

Department: Product Development

Summary

This is an exciting opportunity to join the Equivital team, working for the world leader in our expanding marketplace. Equivital is a technology leader in the professional, high end, wearable human monitoring technology for highly regulated markets such as the military, first response and clinical trials. Our products are used by some incredibly committed and inspiring people, in some amazing places – including the edge of space. Our aim is ‘to save lives through the application of mobile human data’. If you think you can respond to the challenges this brings, we would like to hear from you.

As a PO you will work with a great agile team delivering web, mobile and desktop applications, ensuring that the team delivers as much business value as possible from the managed backlog. You will work with Product Management to understand the product roadmap and customer needs in order to populate the backlog with the agreed priority. You will also lead SW releases, feeding the status to the Product Release Manager.

What you will be doing

- Manage and prioritise the team backlog according to customer value, which should ultimately deliver the maximum business performance.
- Decomposing product requirements, together with UX, into matured and estimated user stories ready for the sprint. Quality user stories enable developers to implement the right functionality and schedule their work.
- You will take on some parts of the scrum master role, managing daily stand-ups, sprint planning meetings, sprint retrospectives and monitoring sprint progress. You will also present the release and backlog status at the weekly project meeting.
- Ensure the scrum team is never blocked or without information regarding team backlog items leading up to and during sprints.
- Define acceptance criteria that enable developers to write acceptance tests demonstrating business value.
- Accept or reject user stories delivered by the team by validating that stories meet the acceptance criteria and that each story has appropriate acceptance test results.

What you need to have

- BSc in SW engineering or sciences would be an advantage.
- In-depth understanding of the Product Owner and Scrum Master roles, with a proven track record in delivering web and mobile app software products.
- Excellent communication skills in English, written and spoken and able to demonstrate the ability to write clear, well thought through and concise user stories.
- Ability to fully understand the customer value drivers relating to the team backlog.
- Deep understanding of the technical aspects of the project and the ability to create clear team backlog items.
- Strong analytical and innovative thinker with strong negotiation skills.
- Good understanding of software engineering.
- In-depth knowledge and extensive working knowledge of agile methodology, including scrum, SAFe and XP.
- Excellent communication and moderating skills across all business levels.

What we offer

- Chance to work on exciting new products in a fast-growing business, with a great opportunity for personal growth.
- Competitive salary and benefits, including private health care and stock options
- Flexible working.
